

FBRI Research Programs

Together, Geneva's research staff, principal investigators, and collaborating partners support more than 7 FBRI studies to include:

EVIDENCE BASED PRACTICE:

The "Sexual Assault Prevention for Men" study aims to refine Sexuality and Alcohol Feedback and Education (SAFE) through focus groups, interviews, and social norms of male soldiers.

PAIN MANAGEMENT: The aim of the "Evaluation of a Personalized Platform to Pain Management by Characterizing Opiate use Patterns and Habit-Forming Behavior" study is to gauge how patients use and interact with the Patient Engagement Application (PEA).

FEDERAL CONTRACT SERVICES:

This study contains one full-time equivalent (FTE) Research Protocol/Medical Writer for the Department of Research at Womack Army Medical Center (WAMC) in Fort Bragg, NC.

REHABILITATIVE MEDICINE:

This randomized controlled trial focuses on using shear wave elastography to assess for physiologic changes after blood flow restriction and train patients with chronic achilles tendinopathy.

NEUROLOGY: The "Portable Warrior Test of Tactical Agility" study assesses the challenging motor tasks of injured service members with mBTI such as running, obstacle avoidance, and combat roll.

WOMEN'S HEALTH: The "Health Literacy Numeracy and Patient Education in Pregnancy-Related Diabetes" study investigates the use of a pregnancy education toolkit for diabetes during pregnancy and the effect on patient satisfaction.

OTOLARYNGOLOGY (ENT):

The purpose of this study is to assess the hearing tests completed at military installations and support the "Hearing Fitness for Duty and Return Duty" (HFFD) developments conducted by Creare.
