Optimizing Military Performance Through Scientific Innovation

MISSION: Optimizing military human performance through scientific innovation and enduring partnerships with military investigators and their collaborators.

The Fort Bragg Research Institute (FBRI) was formed in 2018 as a collaborative effort between Womack Army Medical Center, Fort Bragg and the Geneva Foundation. Capitalizing on the combined strength of those organizations along with local, regional and state partners, the FBRI provides world-class research support focused on the operational needs of the warfighter.

FBRI supports innovative medical research toward optimizing military human-performance. The institute works with warfighting commands to ensure that their needs, gaps, and requirements are vigorously and comprehensively addressed by the scientific community, thereby reducing redundant effort and, perhaps more importantly, ensuring that research funds are invested wisely.

READINESS

RESILIENCE

TREATMENT

REHABILITATION

FBRI is dedicated solely to research supporting the capability of the warfighter in areas including human performance, sustainment, traumatic brain injury, and the female warfighter.

- Innovative research that directly addresses readiness, effectiveness, and sustainment of the warfighter.
- Non-invasive psychological, physiological, and environmental monitoring.
- Supporting local, regional, and state medical research related conferences, symposia, and colloquia.
- Research assistance for unit-sponsored and force-directed individual research projects.

The Fort Bragg Research Institute is a program of The Geneva Foundation.
